/Gilberto Barron Jr./ Supervisory Patent Examiner, Art Unit 2432	/VIRGINIA HO/ Examiner, Art Unit 2432		

Continuation of 11. does NOT place the application in condition for allowance because: With respect to applicant's argument that the Boyko reference is relied upon to support the U.S.C. § 103(a) rejection of claims 1, 2, 5, 6, 13, 19, and 35-40 over Hendricks, Examiner respectfully disagrees. Following Applicant's arguments (filed 06/22/2009), Examiner presented Boyko (Final rejection filed 11/10/2009) as evidence to support Examiner's taking of Official Notice (Non-Final rejection filed 03/20/2009) with respect to encrypting values communicated during a key agreement/exchange protocol and the grounds of rejection remained the same.

With respect to the rejection of the claims, Hendricks teaches utilizing a key exchange protocol, such as Diffie-Hellman, in order to satisfy the exchange of initial key negotiation information (Fig. 24b, item 5200) between a Sender and a Recipient, both parties then being able to independently generate a Seed key (Fig. 24b, item 5203) utilizing a seed key generator algorithm (Fig. 24b, item 5201).

Applicant asserts that "transforming the first signal using the transformed second signal" does not satisfy the limitation of generating the seed as a "function of at least the first string and the second string," as Diffie-Hellman does not feature generating a secure cipher key as a function of a transformed first signal (first string) and a transformed second signal (second string) (in the case of the first converser). However, Examiner notes that independent claims 1 and 35-40 feature generating the seed "as a function of at least the first string and the second string." As such, in accordance with the broadest reasonable interpretation of the phrase "as a function of" the transformed first signal is a function of the first signal, and vice versa. Therefore, Hendricks does teach "generating a seed as a function of at least the first string and the second string" utilizing a protocol such as Diffie-Hellman, in the manner described.
